

## **Scope of Work**

Public Health Risk Assessment Project Along Wildlife Trade Supply Chain in China  
Wildlife Conservation Society (WCS)

### Description of the service

Conducting desk research on the risks of zoonotic spillover at various critical stages of the wildlife trade supply chain, identify the high-risk scenarios and behaviors, to provide a solid theory foundation for field research.

- Coordinating the formation of the expert panels and guided project design, engaged with relevant stakeholders to conduct research on high-risk scenarios and behaviors within the wildlife trade supply chain. Assess the transmission risks and list the required elements for risk assessment.
- Compiling lists of high-risk host species and pathogens through interviews or surveys, to understand the current situation of zoonotic disease prevention and control in China, prioritized diseases, pathogens, and potential wildlife host categories.
- To engage with relevant stakeholders and conduct an interview or panel to gather relevant information, list the required elements for risk assessment, and the availability of relevant data for these elements.
