

## **Scope of Work**

Field Research Project Along Wildlife Trade Supply Chain in China

Wildlife Conservation Society (WCS)

### Description of the service

To conduct a systematic assessment of the risks of zoonotic spillover pathogens at various critical stages of the wildlife trade supply chain and propose new strategies and solutions to prevent public health risks arising from the wildlife trade.

- Select 4-5 observation sites that cover major stages, priority disease species, and key hosts.
- Developing a risk assessment report, inviting external experts to review and give comments on the initial draft, and finalizing the report based on the inputs.
